YASH GHONGADE

AI Engineer | Data Scientist

Pune, India | +91 96073 51273 | yashghongade1273@gmail.com

SUMMARY

AI Engineer with 1+ year of experience who enjoys turning messy, real-world data into dependable AI systems. Builds production **RAG, OCR, and LLM pipelines** in Python and Microsoft Azure that process thousands of legal documents. A hands-on builder and quick learner who takes **end-to-end ownership**, from data collection and model training to deployment, with a growing focus on **agentic AI** (LangChain, LangGraph, MCP) and **measurable business impact**.

SKILLS

Programming & Frameworks: Python, SQL, TypeScript, FastAPI, Flask, Django, REST APIs, React, Next.js

Generative AI & LLMs: Retrieval-Augmented Generation (RAG), Agentic RAG, Prompt Engineering, Embeddings, Semantic Search, Re-ranking, Metadata Filtering, Model Fine-Tuning, OpenAI API, Claude, Gemini, Hugging Face, Ollama, Local LLMs

Agentic AI: LangChain, LangGraph, CrewAI, Model Context Protocol (MCP), Multi-Agent Workflows, Tool Calling, Agent Orchestration

Vector Search: FAISS, Azure AI Search, AWS OpenSearch, Sentence Transformers

Machine Learning & Deep Learning: Scikit-Learn, TensorFlow, Keras, PyTorch, Regression, Classification, Random Forest, K-Means Clustering, Neural Networks, Model Evaluation, Cross-Validation

Data Engineering & Analytics: ETL Pipelines, Pandas, NumPy, Web Scraping (Selenium, BeautifulSoup), OCR (Azure AI Document Intelligence, PyMuPDF), EDA, Matplotlib, Seaborn, Plotly, Power BI, Tableau

Cloud & MLOps: Microsoft Azure, AWS (Bedrock, S3), Docker, Kubernetes (Basics), Terraform, CI/CD, Git, GitHub, GitLab, Linux

Databases: MySQL, Microsoft SQL Server, MongoDB

EXPERIENCE

AI Engineer | *PLS (Process Legal Support)* **Apr 2026 - Present**

- Build and maintain **production AI systems** that extract structured case data from **thousands of New York court filings** using **OCR**, **RAG**, and **Python** on **Microsoft Azure**.
- Automate legal-data workflows **end to end**, from document collection and processing to database sync and reporting, replacing manual data entry.
- Deliver internal web apps and dashboards that let non-technical teams track pipelines, manage files, and analyse territory data.

Data Scientist Intern | *Incubators Pvt. Ltd.* **Jul 2025 - Feb 2026**

- Built and evaluated **machine learning models** (Random Forest, Decision Tree, **TensorFlow**, **Keras**) for prediction and classification, using **Scikit-Learn Pipelines** and **cross-validation**.
- Conducted **exploratory data analysis (EDA)** with Pandas, Matplotlib, and Seaborn, presenting findings that guided feature selection and business decisions.
- Prepared model-ready datasets with analytical **SQL** and containerized models with **Docker** for consistent deployment.

PROJECTS

Legal Document Intelligence & ETL Pipeline

Python, FastAPI, Azure AI Document Intelligence, RAG, PyMuPDF, Pandas, MySQL, SQL Server, Selenium, curl_cffi

- Extracted structured case data from NYSCEF and WebCivil court filings using **Azure OCR**, **RAG**, and PyMuPDF, feeding a **producer-consumer ETL architecture** with retries, idempotent writes, and structured error handling.
- Integrated **REST APIs**, ASP.NET Web API, **SQL Server**, and FTP to automate case extraction, ZIP-code and server-code assignment, and GUID mapping across systems.

- Engineered document-acquisition pipelines with **Selenium**, BeautifulSoup, and curl_cffi, using authenticated session management to reduce failed downloads at scale.

Video RAG AI Teaching Assistant

Python, OpenAI Whisper, FAISS, Sentence Transformers, OpenAI API

- Built an AI teaching assistant that lets students query lecture videos in plain language, transcribing **20+ hours** of video and audio with **OpenAI Whisper**.
- Indexed transcript chunks as **Sentence Transformer embeddings** in **FAISS** for semantic search, returning relevant context in **under 2 seconds** per query.
- Grounded answers in retrieved transcripts with source timestamps, reducing hallucinated responses by **~30%** versus a plain LLM baseline on a 50-question evaluation set.

AI Recruitment Screening & Shortlisting Assistant

Python, Flask, MySQL, PyMuPDF, LLMs, MCP, REST APIs

- Designed an **MCP-inspired** recruitment assistant that parses PDF resumes with **PyMuPDF** and uses **LLMs** with structured **prompt engineering** to extract skills, experience, and education.
- Built a **skill-based scoring engine** that ranks candidates against job requirements, cutting manual screening time by **~60%** across **100+ resumes** per batch.
- Delivered the system through a **Flask** + **MySQL** backend and **REST APIs**, with automated **SMTP** emails notifying candidates once scoring completes.

Territory Intelligence & File Management App

Next.js, TypeScript, React, Python, MySQL, REST APIs, PyInstaller

- Developed a **geospatial web app** in **Next.js**, **TypeScript**, and **React** with secure **authentication**, server-level filtering, **date-range analysis**, and file assignment.
- Shipped **real-time monitoring dashboards** and scheduled **Excel/CSV reports**, backed by **Python** REST APIs and **MySQL**, giving managers a live view of pipeline health.
- Packaged internal tools as **PyInstaller** Windows executables so non-technical staff can run workflows and track status independently.

EDUCATION

Bachelor of Engineering (B.E.), Information Technology **2021 - 2025**

Smt. Kashibai Navale College of Engineering (SKNCOE), Pune *CGPA: 7.89/10*

CERTIFICATIONS

- **Microsoft Certified: Azure Fundamentals (AZ-900)** | *Microsoft*
  Cloud concepts, core Azure services, security, governance, and cost management.
- **Data Science Certification**
  Python, statistics, data analysis, visualization, and machine learning fundamentals.

ACHIEVEMENTS

- **MIT Gen AI Hackathon, 4th Place:** Built and presented a working Generative AI solution under strict time limits, ranking among the top teams.
- **Web Development Hackathon, 3rd Place:** Designed and shipped a full-stack web application with a team, judged on functionality, design, and presentation.
